

Rehabilitation Software Vendor Release Multi-Entity Upgrade

New Haven, CT.- April 18, 2007

Chart Links, a software solution vendor for outpatient rehabilitation organizations announced the immediate availability of version that supports a **multi-entity architecture**. Company President Ron Miller, M.D., stated that “the latest version meets the need of large integrated delivery system with many facilities which need clinical and administrative data segregated or independent organization that organize to share resources”. Facilities can share the required infrastructure, which reduces cost of hardware and support while operating as a single facility when required. Concurrently contingent administrative oversight of all facilities is possible upon role-based security.

About Chart Links

Chart Links is a premier provider of outpatient rehabilitation software designed to assist providers in improving productivity and maximizing reimbursement.

Dedicated solely to the needs of multi-disciplinary adult and pediatric rehabilitation providers, the company serves over 1800 users at both nationally recognized hospitals and smaller organizations.

The Chart Links product integrates scheduling, clinical workflow, documentation, insurance authorization, plans of care, charge capture and an electronic medical record into a single solution to meet the needs of both clinicians and administrators. For more information about Chart Links, visit:
