

Chart Links to Launch Version 5 of its Rehabilitation Software

Flowsheet documentation, a new user interface, enhanced Medicare Time Tracking features and patient appointment reminders allow the product to further its leadership position in offering enterprise-level rehabilitation-specific clinical documentation and workflow management

NEW HAVEN, CT. May 1, 2008 — Chart Links, a leading provider of clinical documentation and workflow management software for medical rehabilitation facilities, today announces its intention to launch Version 5 of its enterprise software this month. To better meet the demands of scheduling, documenting, driving revenue and reporting outcomes for multi-disciplinary therapy care in an outpatient setting, the software release will include these features, among others: flowsheet documentation, a new user interface, enhanced Medicare Time Tracking features and automated patient appointment reminders.

“Chart Links is advancing its product offering,” says Chart Links President and Chief Medical Officer Ron Miller. “With a new management team in place and a renewed focus on software enhancements, our interface is fresh, our workflow management capabilities broader, and our rehabilitation-specific content is deeper.”

Chart Links’ software streamlines all of the daily tasks associated with a patient's physical therapy, occupational therapy, speech language pathology, or audiology visit. It automates workflow for referrals, insurance authorizations, cross-discipline scheduling, documentation, charges, and more.

About Chart Links, LLC

For 12 years, Chart Links has developed rehabilitation software that allows medical rehabilitation facilities to be more efficient and to provide a higher quality of care by delivering results in the areas of compliance, outcomes, analytics and revenue.
